

Subject program „7ÄA17/TVL Healthy Newborn and a Child”

Year: 2019/2020

Status: Active

Subject language Estonian

Creditpoints 4 ECTS

Grading method Distinctive (letters)

Academicians

General

Subject objective To acquire knowledge on a development of a newborn and a child and the factors affecting it, to acquire skills to implement the knowledge during the midwifery care.

Learning outcomes 1. Knows the particular features of a newborn adjustment period and is able to evaluate them.
2. Knows the anatomical-physiological characteristics of a child's development and is able to evaluate them.
3. Describes the health promotion principles to a child and his/her family.
4. Demonstrates the examination and care principles of a child in simulation environment.

Learning outcomes	
1. Outcome	1. Knows the particular features of a newborn adjustment period and is able to evaluate them.
grade „Sufficient(E)”	Students knowledge on the particular features of a newborn adjustment period and is ability to evaluate them is on a minimum level 51-60% of correct answers on the test.
grade „Satisfactory(D)”	Students knowledge on the particular features of a newborn adjustment period and is ability to evaluate them is on a satisfactory level. 61-70% of correct answers on the test.
grade „Good(C)”	Students knowledge on the particular features of a newborn adjustment period and is ability to evaluate them is on a good level. 71-80% of correct answers on the test.
grade „Very good(B)”	Students knowledge on the particular features of a newborn adjustment period and is ability to evaluate them is on a very good level 81-90% of correct answers on the test.
grade „Excellent(A)”	Students knowledge on the particular features of a newborn adjustment period and is ability to evaluate them is on an excellent level 91-100% of correct answers on the test.
2. Outcome	2. Knows the anatomical-physiological characteristics of a child's development and is able to evaluate them.

Learning outcomes	
grade „Sufficient(E)”	Students knowledge on the anatomical-physiological characteristics of a child's development and the ability to evaluate them are on a minimum level. 51-60% of correct answers on the test.
grade „Satisfactory(D)”	Students knowledge on the anatomical-physiological characteristics of a child's development and the ability to evaluate them are on a satisfactory level. 61-70% of correct answers on the test.
grade „Good(C)”	Students knowledge on the anatomical-physiological characteristics of a child's development and the ability to evaluate them are on a good level. 71-80% of correct answers on the test.
grade „Very good(B)”	Students knowledge on the anatomical-physiological characteristics of a child's development and the ability to evaluate them are on a very good level. 81-90% of correct answers on the test.
grade „Excellent(A)”	Students knowledge on the anatomical-physiological characteristics of a child's development and the ability to evaluate them are on an excellent level. 91-100% of correct answers on the test.
3. Outcome	3. Describes the health promotion principles to a child and his/her family
4. Outcome	4. Demonstrates the examination and care principles of a child in simulation environment.

Study in different study forms

Study form	Lecture	Excerice	Seminar	Practice	Homework	Internet study	Out of office	Practical training
All study forms			38.0	16.0	50.0			

General description

The subject is held during the spring semester of the first year. Prerequisite subjects: Anatomy, Physiology and Healthy Person. Passing the subject is a prerequisite to the subject Normal Pregnancy and Child Birth.

Forms of studying

The subject is taught by two lecturers who have divided the topics among themselves. A visiting lecturer may also participate. Timetable is indicative and may contain changes in topics as well as in the duration.

In case of not being able to participate in the studies, the lecturers must be informed beforehand and additional assignments may be given instead.

If it is not possible to participate in the simulation class, there is a possibility to retake the class next study year with a new course.

Student has the right to main evaluation and to reevaluations in case of a previous negative result (including non-appearance).

Consultations have to be agreed upon beforehand.

Kristina Krivats-Arba: kristina.krivats-arba@ttk.ee

Silja Mets-Oja: silja.mets-oja@ttk.ee

Teaching methods

Seminar, discussion, practicing, group works, simulation learning, independent work.

Content and method for independent study

The aim is to create a practical tool which can be used in the study process and during practical training. Independent work is creating a concept map on observation of the child development. The basis is the "Health Examination of Children up to 18 Years". Independent work evaluation method is nondifferentiated.

Methods of assessment

A test in Moodle environment is used to evaluate on which level the student has achieved the learning outcomes.

Participationg in seminars, practical classes and simulation classes together with timely presenting of independent work are the prerequisites for taking the test. (learning outcome 3 and 4).

Interim evaluations are made during lectures to revise the previously addressed topics. In order to take the final test all interim tests have to be passed with a positive result - minimum 70% of correct answers.

Additional information

Requirements of using the Simulation Center:

1. Personal belongings (bags, laptops, mobile phones and other smart devices) should be left in the individual locked closet;
2. Special college uniform for practical classes and indoor footwear must be worn during the classes;
3. All personal hygiene requirements are followed;
4. Food and drinks, incl. coffee, tea, etc. is not allowed in the Simulation Center;
5. Simulation Center is opened only with the lecturer's entry card.

Filming and taking photographs is not allowed.
